

Flagship AI Portfolio: Six-Row Worksheet

For each row, record only three things: what you leave behind, how someone checks it, and what the local exercise does not establish.

01	Small decision: user, timing, cost of error, owner, and non-goal	
02	Data boundary: source receipt, allowed/excluded fields, and fixture version	
03	Simple starting point: baseline, one deliberate change, and reason for comparison	
04	Fixed situations: normal, missing, stale/conflict, out-of-scope, and regression	
05	Stop and return: KEEP/REVISE/STOP, reviewer, and earlier method	
06	Hand-off map: README, run command, five-minute walkthrough, and nonclaims
