

Before choosing a learning mode: write the decision and baseline Worksheet

Start with available evidence, an observation cutoff, and a human decision to separate supervised learning, exploratory analysis, and an honest first baseline.

01	Reader decision and user	
02	Input, data boundary and prohibited action	
03	Simple baseline and acceptable output	
04	Fixed cases, failure and handoff	
05	What someone can check in the system: version, test, trace, or result	
06	What still needs explaining before work use: owner, cost, risk, and next step
