

Do you actually need a sequence model? From event order to framework boundaries Worksheet

Write the observation cutoff, tabular baseline, and allowed decision before comparing RNNs, LSTMs, GRUs, attention, and framework trade-offs.

01	Reader decision and user	
02	Input, data boundary and prohibited action	
03	Simple baseline and acceptable output	
04	Fixed cases, failure and handoff	
05	What someone can check in the system: version, test, trace, or result	
06	What still needs explaining before work use: owner, cost, risk, and next step
