

Transformer blocks and architecture choice: begin with the task contract, not the model name

Worksheet

Use a small routing-plus-grounded-draft flow to distinguish encoder, decoder, attention blocks, output contracts, and workflow boundaries.

01	Reader decision and user	
02	Input, data boundary and prohibited action	
03	Simple baseline and acceptable output	
04	Fixed cases, failure and handoff	
05	What someone can check in the system: version, test, trace, or result	
06	What still needs explaining before work use: owner, cost, risk, and next step
