

GitHub Portfolio Proof Pack

Make a synthetic AI project's decision, data boundary, baseline, evaluation, CI check and nonclaims inspectable one item at a time.

01	Fictional user, limited decision, cost of error and non-goal	
02	Source receipt, synthetic/public data boundary and material never to publish	
03	Transparent baseline, one candidate change and prohibited actions	
04	Fixed cases: normal, missing, stale, injection, prohibited action and regression	
05	Responsibility boundary between English code/tests and localised README	
06	Test command, CI check, human gate, rollback and nonclaims
