

Inference, memory, scheduling, and serving engines: break down the request path before blaming P99 Worksheet

Use a fixed synthetic workload to separate queue, prefill, decode, tools, validation, retries, memory, batching, and fallback instead of using one average to explain everything.

01	Reader decision and user	
02	Input, data boundary and prohibited action	
03	Simple baseline and acceptable output	
04	Fixed cases, failure and handoff	
05	What someone can check in the system: version, test, trace, or result	
06	What still needs explaining before work use: owner, cost, risk, and next step
