

Tokenisation and domain terms: audit the input before saying a model does not understand

Worksheet

Use token counts, near-match codes, structured fields, and contrast cases to separate representation, retrieval, and workflow problems.

01	Reader decision and user	
02	Input, data boundary and prohibited action	
03	Simple baseline and acceptable output	
04	Fixed cases, failure and handoff	
05	What someone can check in the system: version, test, trace, or result	
06	What still needs explaining before work use: owner, cost, risk, and next step
